BIG GAME HUNTING STATISTICS FOR THE 2001/02 SEASON

INTRODUCTION

Big game hunting statistics have been compiled in British Columbia on an annual basis for many decades. In the days of the old B.C. Game Commission, records were kept in hand written ledgers. More recently, annual hunting survey results were published in book form from 1964 through 1975. In 1976, wildlife management switched from 28 game management areas to 7 regions which were further subdivided into over 200 management units. In 1980 parts of Regions 3 (Thompson Region) and 4 (Kootenay Region) were re-assigned to a new Region 8 (Okanagan Region). The regions have remained quite consistent since that time, with only a few management units being subdivided to make new management units and a few minor boundary changes. There are currently 225 management units

Prior to 1976, hunting statistics were kept as paper documents only. Since and including 1976, all data has been stored and retained electronically. A menu driven computer system was developed to allow wildlife managers to access their data, and the practice of publishing statistics in book form was discontinued.

Despite easy computer access to hunting statistics, many wildlife managers have continued to express desire to have their data available in book form. This would help them answer quick queries over the phone, take valuable data with them to meetings and so on. It is with these needs in mind that this publication has been produced. There are an infinite number of questions which can be addressed through analysis of the electronic data files which contain B.C.'s hunting statistics. This paper based volume can only answer a small subset of these questions, but it is useful in considering many of the more commonly asked ones.

The information contained within these pages presents data compiled at the provincial, regional and game management zone levels. The maps on pages 4 through 12 display the wildlife management regions, game management zones and management units used by the B.C. Fish and Wildlife Recreation and Allocation Branch. The game management zones are small groupings of management units based on geographical, ecological and access criteria. In many instances, the game management zones are similar to the former game management areas.

DATA SOURCES USED IN THIS PUBLICATION

Data from several sources was used to produce this volume. These sources are discussed below.

Compulsory Inspection Program:

Successful hunters of caribou, cougar, grizzly bear, mountain goat, and mountain sheep are required by law to report to the Wildlife Branch within 10 days of their kill. They complete a data form which captures a detailed account of their hunt. The data is stored in an electronic data base. This system provides a 100% count of the legal hunting harvest for these species. The harvest statistics presented in this publication for caribou, cougar, grizzly bear, mountain goat and mountain sheep were taken from the Compulsory Inspection Program.

Hunter Sample Survey:

Each year, a mailed questionnaire is sent to a random sample of hunters who purchased licences to hunt each big game species. The sampling intensity is high because statistics are needed for each management unit, and many of the management units are remote and lightly hunted. In order to contact enough hunters to assure useful returns, sample sizes must be large. Approximately 60,000 hunters are sent a questionnaire each year. A second questionnaire is sent to those who do not respond to the first mailing, and in the end, there is a 70% to 80% response. Follow up surveys to a random sample of non-respondents have revealed no significant response bias.

The survey contacts hunters who purchased licences for every major big game species except bison, which are hunted on a very limited and tightly control scale. The sampling intensities, by species, are as follows:

SPECIES	NUMBER/PERCENT SAMPLED	NUMBER/PERCENT RESPONSE
Black Bear	6,373 / 49%	4,338 / 71%
Caribou	1,386 / 95%	969 / 72%
Cougar	950 / 94%	556 / 60%
Elk	10,067 / 91%	6,719 / 69%
Grizzly Bear	230 / 86%	158 / 70%
Moose	16,774 / 50%	11,670 / 72%
Mountain Goat	1,693 / 89%	1,225 / 74%
Mountain Sheep	1,750 / 93%	1,218 / 71%
Mule (black-tailed) Deer	*28,277 / 34%	19,498 / 73%
White-tailed Deer	13,563 / 51%	9,467/ 73%
Wolf	*19,114 / 23%	13,189 / 73%

* These species are sampled from sales of resident basic licences.

Hunters who purchased licences for Compulsory Inspection species are included in the Hunter Sample Survey because the Compulsory Inspection program only collects data from successful hunters. Accurate estimates of total numbers of hunters and total numbers of days spent hunting are necessary for sound wildlife management. The questionnaire collects this information, and it is added to the harvest information collected through the Compulsory Inspection program in order to provide a complete picture for Compulsory Inspection species.

The Compulsory Inspection program also allows a check on the accuracy of harvest estimates generated through the Hunter Sample Survey. A complete count of legal animals taken by hunters is provided by the Compulsory Inspection program for those species governed by Compulsory Inspection. Since hunters for these same species are also sent a questionnaire, the Hunter Sample Survey also produces estimates of hunter kill. Comparison of these estimates with known values from Compulsory Inspection provides a measure of accuracy for Hunter Sample Survey estimates. Such comparisons are periodically undertaken, and show close agreement between known and estimated harvest figures.

All of the information in this publication related to the number of resident hunters and the number of resident hunter days was derived from the Hunter Sample Survey. Additionally, all estimates of resident harvest for black bear, elk, moose, mule (black-tailed) deer, white-tailed deer and wolf were produced from the Hunter Sample Survey.

Guide-Outfitter System:

All Guide-Outfitters are legally required to complete a Guide-Outfitter Declaration form which provides a detailed account of the hunting activities of each of their clients. The data from these forms is stored in an electronic data base which contains all such data back to 1982. Since all non-resident hunters are legally compelled to have the services of a guide, this system is one of the main sources of non-resident hunting data. As with the Compulsory Inspection Program, this system provides a precise count of animals taken, rather than an estimate, as is the case with the Hunter Sample Survey.

All of the information in this publication related to the number of non-resident hunters and the number of non-resident hunter days was taken from the Guide-Outfitter System. Additionally, all figures for non-resident harvest of black bear, caribou, elk, moose and wolf were taken from the Guide-Outfitter System. The Guide-Outfitter System does not distinguish between mule (black-tailed) deer and white-tailed deer it simply lumps them together as deer. For this reason, no non-resident data is presented for these two species.

*** NOTE *** The confidence limits apply only to the resident totals. Non-resident totals are actual counts taken from Guide Outfitter reports. The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

*** NOTE *** The confidence limits apply only to the resident totals. Non-resident totals are actual counts taken from Guide Outfitter reports. The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

*** NOTE *** The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

Non-resident deer information is collected simply as 'DEER', and cannot be broken down into mule deer or white-tailed deer. For this reason, non-resident data has not been included in this table.

SUMMARY OF WOLF HARVEST DISTRIBUTION BY GAME MANAGEMENT ZONE *** 2001 ***

G.M.Z.	REGION OF RESIDENCE 1	2	3	4	5	6	7	8	RESIDENT TOTAL	LOW 95% C. L.	UP 95% C. L.	NON-RESIDENT TOTAL
Province	38	36	45	31	84	67	119	12	432	325	539	59

*** NOTE *** The confidence limits apply only to the resident totals. Non-resident totals are actual counts taken from Guide Outfitter reports. The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.
